About Me

Senior Software Engineering student focused on DevSecOps and System Security. Proficient in Linux (Arch, Debian), containerization (Docker), and secure software development. Experienced in managing personal VDS environments and automating infrastructure monitoring. Passionate about bridging the gap between development and secure operations.

Technical Skills

- Cybersecurity & Networking: TCP/IP, DNS Management, Log Analysis, SOC Concepts, Web Application Security (OWASP), Basic Penetration Testing, System Hardening (UFW, SSH).
- Systems & DevOps: Linux (Arch, Debian), Docker & Docker Compose, Coolify (PaaS), Bash Scripting, VDS Management, Git, Virtualization.
- Programming Languages: Python (Automation & Data Analysis), Rust (Systems Programming), C++, SQL.

Experience

IT Intern | Koroplast

- Managed Workstation Deployment and OS provisioning for corporate hardware.
- Maintained Physical Infrastructure, including network peripherals, printers, and CCTV surveillance systems.
- Provided on-site technical support, ensuring system uptime and operational efficiency for internal users.

Certificates & Training

- Cybersecurity Summer Camp | TalentCoders.co:
50-hour intensive program on SOC, Pentesting, and Network Security.
- Linux Essentials | Cisco Networking Academy:
Linux architecture and command-line administration.

Key Projects

- Linux Log Anomaly Detection:
Developed a TensorFlow model to automate security breach detection in syslog and auth.log.
- Sentinel (Infrastructure Monitoring):
Created a secure socket-based app for WearOS to monitor real-time server health (CPU/RAM/Uptime).
- Onyx Network:
Engineered a tool for DPI Bypass and network traffic manipulation to ensure resilient communication.
- Mailora:
Built a privacy-first email client in Rust focused on end-to-end encryption and secure SDLC.

Education

Beykent University | B.S. in Software Engineering

- Expected Graduation: 2026
